## Capital Gains Tax Workbook: Answers

## Question 1

Ten years ago, Henry a buy to let investor purchased a property for $£ \mathbf{2 0 0 , 0 0 0}$. He incurred costs of $£ 15,000$.

It needed extensive remedial works which cost $£ 50,000$.

It was sold in October 2023 (Completion date October 1) for $£ 400,000$. Sale costs amounted to $£ 40,000$.

Henry is a higher rate tax payer. This is his only disposal this year and he has no losses to bring forward

Calculate showing all your workings the amount of CGT that would be payable on this sale and state when this would be paid

| Sale price | 400,000 <br> Less sale costs <br> $(40,000)$ | 360,000 |
| :--- | ---: | ---: |
| Improvements |  | $(50,000)$ |
|  | $£ 200,000$ |  |
| Purchase Price | 15,000 | $(215,000)$ |
| Plus costs |  | 95,000 |
| Gain |  | $\underline{6,000}$ |
| Annual Exemption |  | 89,000 |

Tax due $£ 89,000 @ 28 \%=£ 24,920$

This must be paid by December 312023

## Question 2

June sold her holding in ABC OEIC for $£ 43,000$ in $\mathbf{2 0 2 3 / 2 0 2 4}$. Her original investment was £20,000.

In the same tax year she also sold shares in Bad Bank for $£ 5,000$ that she had purchased for $£ 12,000$.

She has losses from a previous year of $£ \mathbf{£ 2 0 , 0 0 0}$.

Calculate the losses she can carry forward to the next tax year working on the basis that she wants to reduce her CGT liability for the current year to zero.

| Sale proceeds ABC OEIC | 43,000 |  |
| :--- | ---: | ---: |
| Acquisition price | $\frac{20,000}{23,000}$ | 23,000 |
| Gain | 5,000 |  |
|  | 12,000 | $(7,000)$ |
| Bad Bank sale | $(\underline{6,000}$ |  |
| Bad Bank purchase |  | 10,000 |
|  |  |  |
| Less annual Exemption | 20,000 | $(10,000)$ |
|  | 10,000 | 10,000 |

## Question 3

Kate bought a property for $£ 150,000$ inclusive of all costs on September $1 \mathbf{2 0 0 3}$. She lived in it until September 12007 when she went to stay with her mother who had suffered a stroke

Her mother died in 2010 and on March 12010 she moved back into her own house. It was unoccupied during this period.

She continued to live there until March 2012 and on the 1 March 2012, as a result of a legacy she purchased and moved into a more central property. She decided to rent out her original house and it was let from March 12015 to February 282023.

The original house was sold on September 12023 for $£ 400,000$.

Her taxable income after her personal allowance is $£ 10,000$ short of the higher rate threshold

Calculate, showing all your workings, the amount of CGT that is payable

The starting point with PPR relief is to draw up a timeline.

The house was owned for 20 years (240 months)

1 September 2003 to 1 September 2007 ( 48 months) Exempt as living there.
1 September 2007 to 1 March 2010 ( 30 months) exempt under 3 year rule
1 March 2010 to 1 March 2012 (24 months) exempt as living there.
1 March 2012 to 1 December 2022 ( 129 months) non exempt
1 December 2022 to September 12023 ( 9 months) exempt last 9 months rule.

111months exempt
129 months non-exempt

| Net sale proceeds | 400,000 |
| :--- | ---: |
| Net acquisition cost | $\frac{150,000}{250,000}$ |
| Less exempt amount |  |
| $111 / 240 \times 250,000=$ | $£ 115,625$ |
| Amount chargeable |  |
| No lettings relief as she wasn't living in the property |  |
| Less Annual Exemption | $£ 6,000$ |
|  | $£ 128,375$ |

£10,000 @ 18\% ..... 1,800
£118,375 @ 28\% ..... 33,145£30,945

## Question 4

Tom is a pensioner with an income of $£ 20,000$. He collects antiques as a hobby and in the current tax year he sold the following items:

- A painting for $£ 15,000$ with sale costs of $£ 250$. He bought it 10 years ago for £2,000.
- A vase sold for $£ 5,800$ that he bought for $£ 3,00012$ years ago.
- A necklace for $£ 8,400$ that he bought for $£ 2,400$ six years ago.

Calculate showing all your workings the CGT that will be payable.

The painting, the vase and the jewellery are chattels so we must check the situation on each

| Painting proceeds | 15,000 |
| :--- | ---: |
| Less sale costs | $\underline{250}$ |
| Less purchase price | 14,750 |
| Gain | $\underline{2,000}$ |

Using the chattels rule gain would be 5/3 of ( $£ 15,000-£ 6,000)=£ 15,000$ so we use normal calculation. Note if chattel rule is used you cannot deduct sale costs.

Vase was sold for under $£ 6,000$ therefore is exempt
Necklace proceeds 8,400

Less purchase price $\underline{\mathbf{2 , 4 0 0}}$
Gain 6,000

Using the chattels rule
$5 / 3$ of $(£ 8,400-£ 6,000) £ 4,000$

Total gains

| Vase | $£ 12,750$ |
| :--- | ---: |
| Necklace | $\underline{4,000}$ |
| Total | 16,750 |
| Less annual exemption | $\underline{6,000}$ |
|  | 10,750 |
| $£ 10,750 @ 10 \%$ | $£ 1,075$ |

## Question 5

Henry bought shares in the same company on the following dates.

|  | Number of shares | Price |
| :--- | ---: | :--- |
|  |  |  |
| June 2014 | $\mathbf{4 , 0 0 0}$ | $100 p$ |
| June 2015 | $\mathbf{3 , 5 0 0}$ | $180 p$ |
| June 2016 | 2,500 | $200 p$ |
| June 2017 | 2,000 | $220 p$ |

## Part (a)

If he sells $\mathbf{6 , 0 0 0}$ shares on November 12023 for 240p calculate the gain before annual exemption together with the number of shares in the pool after this transaction and their base cost.
"Pooled" acquisition price

|  | Number of shares | Price | Total |
| :--- | :---: | :---: | ---: |
| June 2014 | 4,000 | 100 p | 4,000 |
| June 2015 | 3,500 | 180 p | 6,300 |
| June 2016 | 2,500 | 200 p | 5,000 |
| June 2017 | $\underline{2,000}$ | 220 p | $\underline{4,400}$ |
|  | 12,000 |  | $£ 19,700$ |

Average Price $\quad £ 19,700 / 12,000=164 p$

| Sale proceeds 6,000 shares @ 240p | $£ 14,400$ |
| :--- | ---: |
| Acquisition cost 6,000@ 164p | $\frac{9,840}{4,560}$ |

Remaining pool 6,000 shares base cost $£ 9,840$ (base cost remains 164 p)

Part (b)

If the share price then falls he buys 6,000 shares in the same company for $200 p$ calculate the gain, if any, and the base cost of the pool if
(i) They are bought on December 15
(ii) They are bought on November 15

December 15 The shares were repurchased after 30 days so the shares enter the pool. The gain on the sold shares remains $£ 4,560$

The new cost is

6,000 shares @ 164p = £9,840
6,000 shares @ 200p = £12,000

12,000 shares purchased for $£ 21,840$
New pool price $£ 21,840 / 12,000=182 p$

## November 15

As shares were purchased within 30 days they are matched with the 6,000 shares sold on November 1.

| 6,000 shares sold @ 164p | $£ 9,840$ |
| :--- | ---: |
| 6,000 shares bought at 200p | $£ 12,000$ |
| Loss | $(£ 2,160)$ |

The purchases shares don't enter the pool so the acquisition price remains $164 p$

## Question 6

Stan and Ann separated on July 1 2022. They finalised their divorce on June 1 2023. As part of the settlement Stan is transferring $\mathbf{5 0 \%}$ of his total holding of $\mathbf{5 0 , 0 0 0}$ units in the XYZ UK share fund. The original acquisition price was 60 p a unit

Calculate the taxable gain and state who is responsible for paying the tax if:
(i) The units are transferred on February 12023 and Ann sells them on May 12023 for 320p
(ii) The shares are transferred on May 12023 and Ann sells them immediately for 325p

## February 1

As they were living together at some point in the tax year of separation, inter spousal transfer is available so no tax at transfer but when Ann sells her acquisition price is what Stan paid for them

| $25,000 @ 320 p$ | $£ 80,000$ |
| :--- | ---: |
| $25,000 @ 60 p$ | $£ \underline{15,000}$ |
| Gain | $£ 65,000$ |
| Less | $£ 6,000$ |
|  | $£ 59,000$ |

Ann would be liable to pay the tax.

## May 1

Although they are still married at the date of transfer they cannot use inter spousal transfer because they were not living together in that tax year

The transfer from Stan is therefore chargeable:

| $25,000 @ 325 p=$ | $£ 81,250$ |
| :--- | ---: |
| $25,000 @ 60 p=$ | $\underline{£ 15,000}$ |
|  | $£ 66,250$ |
| Less | $£ 6,000$ |
|  | $£ 60,250$ |

Stan pays the tax. Ann will not pay any tax as she will have acquired then for 325 p

## Question 7

Tony was employed and on a salary of $£ 40,000$ until he was made redundant on October 1 2023. He was paid on the $25^{\text {th }}$ of each month.

He received $£ 40,000$ in redundancy pay and had received $£ 3,000$ in Social Security Benefits for the remainder of 2023/24.

In view of this he decides to sell most of his other assets. These consisted of the following: A portfolio of unit trusts that were acquired for $\mathbf{£ 2 0 , 0 0 0}$ and sold for $\mathbf{£ 3 0 , 0 0 0}$

A house he was renovating with a view to renting it out. The acquisition price including all costs was $£ \mathbf{2 0 0} \mathbf{0 0 0}$. He has spent $\mathbf{£ 8 0 , 0 0 0}$ so far and sold the property for $\mathbf{£ 2 5 0 , 0 0 0}$

A holiday home that had been left to him by his father with a probate value of $£ 300,0000$. He received $£ 390,000$ after sales costs.

Calculate, showing all your workings his CGT liability in 22/23

| Salary (6 months) | $£ 20,000$ |
| :--- | ---: |
| Taxable redundancy | $£ 10,000$ |
| Social Security | $£ 3,000$ |
| Total income | $£ 33,000$ |
| Less PA | $£ 12,570$ |
|  | $£ 20,430$ |

Remaining basic rate band $£ 17,270$

Loss on Property $£ 250,000$ less $£ 80,000$ less $£ 200,000=£ 30,000$
Gain on holiday home $£ 390,000$ less $£ 300,000=£ 90,000$
Gain on unit trusts $£ 10,000$

Offset loss on property against property gain $£ 90,000$ less $£ 30,000=£ 60,000$

The property gain can be offset against the annual exemption

Net Gain
£60,000
Less annual exemption
£6,000
£54,000

Remaining basic rate band must first be offset against non-property gain.

| Remaining BRB | £17,270 |  |
| :---: | :---: | :---: |
| Non-property gain | £10,000 @ 10\% = | £1,000 |
| Balance of BRB | £7,270 @ 18\% | £1,308.60 |
| Remainder of property |  |  |
| Gain in higher rate | £40,430 @ 28\% | £11,320.04 |
|  |  | £13,628.64 |

## Question 8

Harry and Sally bought their house on June $\mathbf{1} 2008$ on a joint tenancy basis. The price taking account of costs was $£ \mathbf{2 0 0}, \mathbf{0 0 0}$.

In 2013 Harry died and on June 12018 Sally decided to let out two rooms through Airbnb to supplement her income. The let rooms comprised $20 \%$ of the property.

She continued to live in the house and had regular lettings until she decided to sell the house. This was completed in June 1 2023. The proceeds after costs were $£ 500,000$.

Her pension income is $\mathbf{£ 2 5 , 0 0 0}$
Calculate her CGT liability.

Disposal proceeds $£ 500,000$
Acquisition cost $£ 200,000$
Net proceeds $£ 300,000$
$20 \%$ does not get PPR so chargeable gain is $£ 60,000$

However, she qualifies for Lettings Relief

- PPR relief is $£ 240,000$
- Gain due to lettings $1 / 6 / 18$ to $1 / 6 / 23$ ( 60 months)
- $60 / 180 \times £ 300,000=£ 100,000$
- Lettings relief is $£ 40,000$ as lowest of the three calculations

| Chargeable gain | $£ 60,000$ |
| :--- | ---: |
| Less lettings relief | $\underline{£ 40,000}$ |
| Gain | $£ 20,000$ |
| Less annual exemption | $\underline{£ 6,000}$ |
| Taxable gain | $£ 14,000$ |

Tax due $£ 14,000$ @ 18\% $£ 2,520$
